

## **POST OPERATIVE INSTRUCTIONS FOR RESTORATIONS**

Anesthetic, if used, will usually last 2–4 hours. The more active you are, the faster it will wear off. Be careful not to chew your lips, cheeks, or tongue.

Some hot/cold sensitivity may be experienced. This sensitivity can sometimes last up to 4–6 weeks. Minor discomfort may occur when chewing, but this should not last for more than two days. If this discomfort lasts for more than two days, please contact us. A slight adjustment may be needed.

You may take two Extra Strength Tylenol and two Ibuprofen tablets at the same time every 4–6 hours for discomfort if needed.

If you have any other questions, please do not hesitate to call.
